

CASE: Hansgrohe

Area: London, UK

Products used: Acoustic Panels

Architect: I-AM

Interior Architect: Tatjana Fairhurst

When Hansgrohe built their unique water studio in Clerkenwell, they wanted to celebrate the natural wonder of water and create a space for education and collaboration. Tatjana Fairhurst, Interior Designer at design agency I-AM used a BAUX design in the meeting room to contrast the open studio feel of the main space. The natural qualities of the wood wool tiles fitted perfectly with Hansgrohe's commitment to sustainability and the colour combinations gave graphic expression to their vision.

Studio spaces are awesome but the nature of open spaces often means high levels of background noise and sound reflections – especially when you have a lot of glass and other hard surfaces. The client wanted to create a sanctuary – a nest for relaxed conversation. The result was impressive. The BAUX designs in the meeting room absorbed sound to create a calm oasis, perfect for conversation. Aqua blues and greens were chosen to give the impression of water and the organic textures of the wood wool tiles gave the room the feeling of a creative nest. The result was a happy client and a quiet, comfortable space to talk and work in.

Products used:

Acoustic wood-wool Panels — Diagonal.
