

# CASE: Breather

**Area:** New York, USA **Products used:** Acoustic Panels

**Architect:** Breather Design **Designer:** Sierra Bangari

Breather is a flexible workspace provider, based in Montreal, Canada. The company manages over 500 workplaces in more than 10 major cities. Breather allows individuals and companies to access fully furnished and serviced workspace on demand seamlessly via their website and app. They recently installed BAUX Acoustic Panels at two of their locations in New York, helping them to transform office spaces into something more akin to a showroom.

At 100 Crosby Street, BAUX Panels in natural shades of brown compliment the clean simplicity of the wooden floor and whitewashed walls. The open-plan layout is well-served by the acoustic properties of the Panels, helping to safeguard against unwanted echoes and absorb excessive noise.

At a second location, 108 West 39th, Breather opted for a lighter and more colourful palette, installing BAUX Panels in Arch, Diagonal and Stripes in shades of blue and light grey. Using patterns that call to mind classic stereo design, the Breather design team created a tableau of unique and functional sound control.

## **Products used:**

**Acoustic wood-wool Panels** — Diagonal, Stripes, Lines, Arch.
