

# CASE: Werkspoorfabriek

**Area:** Utrecht, Netherlands    **Products used:** Acoustic Panels

**Architect:** Zecc    **Interior Architect:** Bart Kellerhuis

Zecc Architects has converted a derelict steel construction factory in Werkspoor, Utrecht, into a workspace for over fifty businesses and creative entrepreneurs. The building includes offices, workshops and hospitality spaces, all nested within this classic example of Dutch industrial heritage..

With a building this size, Zecc wanted to make big gestures. The concept was to keep the scale and spaciousness and create new spaces for businesses to flourish. Much of the original brick, glass and steel features have been kept to preserve the character and identity of the building and the design team retained the factory's linear form by ensuring it was possible to walk the entire length of the interior space. The building inspires with its spectacular height, inviting interior vistas and when night falls, the large glass factory walls illuminate the surrounding area.

## **Products used:**

**Acoustic wood-wool Panels** — Diagonal, Stripes, Lines, Quilted, Check.
